

# Nexalin is a Non-Invasive Drugless Therapy

*With Proven Effectiveness for  
Depression, Anxiety and Insomnia.*

Normally, your brain manufactures neurochemicals that keep your moods in a generally balanced state (homeostasis). Deep depression, massive mental trauma, high anxiety or chronic insomnia – in any combination – can throw this homeostasis out of control.

To the sufferer,  
this seems  
permanent.

But Nexalin  
effects a vitally  
important change.  
With three pads  
placed gently

on the patient's head (one on the forehead and one behind each ear), the Nexalin Medical device uses a tiny, virtually unnoticeable electrical current to stimulate the hypothalamus and surrounding deep centers of the brain that control normalized levels of neurochemicals – the ones that regulate your body's homeostasis. Called by various names, like Transcranial Electronic Stimulation (TES) or Cranial Electrotherapy Stimulator (CES), Nexalin technology represents a major medical breakthrough in alleviating anxiety, depression and insomnia.

## What Our Patients Say...

### Insomnia...

I had tons of trouble sleeping... I wouldn't really sleep at all, and if I did sleep it would only be for 3 hours.

But after Nexalin Therapy, probably the first week, I went to sleep very easily and I was sleeping for 8 hours. I definitely recommend Nexalin Therapy to anyone.

*John, in California*

### Depression...

Nexalin has given me a chance to once again feel the breeze on my face... dance on the beach.

To be able to reduce my medication and see the world through clearer eyes... Nexalin is the answer, for I was far more depressed than I thought- but no more...!

At the end of the day, pure wonderful exhaustion by my own doing, which leads to great sleep.

*Linda, in Illinois*

### Anxiety...

Nexalin has helped me... my anxiety and depression are gone... I can think better... I would recommend Nexalin to anyone with anxiety, depression or insomnia.

*Cindy, in Illinois*

Treating  
Anxiety,  
Depression  
and  
Insomnia  
with today's  
Newest  
Technology

There is finally a better solution than medication.

# Nexalin Technology Inc. Designs and manufactures the leading-edge in Transcranial Electrical Stimulation (TES) Equipment

*Providing your patients with a cost-effective and safe treatment for Anxiety, Insomnia, and Depression.*

## The Nexalin Therapy Solution:

These therapy and treatment conditions present an opportunity to introduce a technology that provides relief for all three symptoms (anxiety, depression and insomnia) with no serious side effects. The **Nexalin Advanced Therapy** provides prolonged relief from these common disorders that have the potential to redefine protocols recommended for treatments in the ADI marketplace.

Testimonials from Psychiatrists have

stated the Nexalin Therapy is an effective method of addressing anxiety, depression and insomnia and a method to improve the most difficult patients who don't respond or progress with pharmaceutical remedies.

## Ensuring Quality With Our Comprehensive Training Program

**Nexalin Technology** has certified and experienced Clinicians on staff to provide the highest quality of training and support services. Our staff averages over 15 years experience in the medical field. We will train and certify the Nexalin Technicians who administer the therapies at all the approved therapy centers. Training Programs usually take up to one week to complete.

The programs include course work, hands on techniques, and clinical oversight while technicians administer the Nexalin therapies. Designated personnel in the medical centers will be technicians who complete the training and certification process. Each center will be supervised and managed by a Medical Director, and in some cases the same Medical Director may oversee multiple centers in a geographic area. The day-to-day operations of the centers will be managed by trained technicians and support personnel.
